Agenda

Foundations

- Goals
- Why Visualization?
- Real-World Examples
- Tools Overview
- FANS Framework

Dava-Viz Mini-Demos

Final Demo

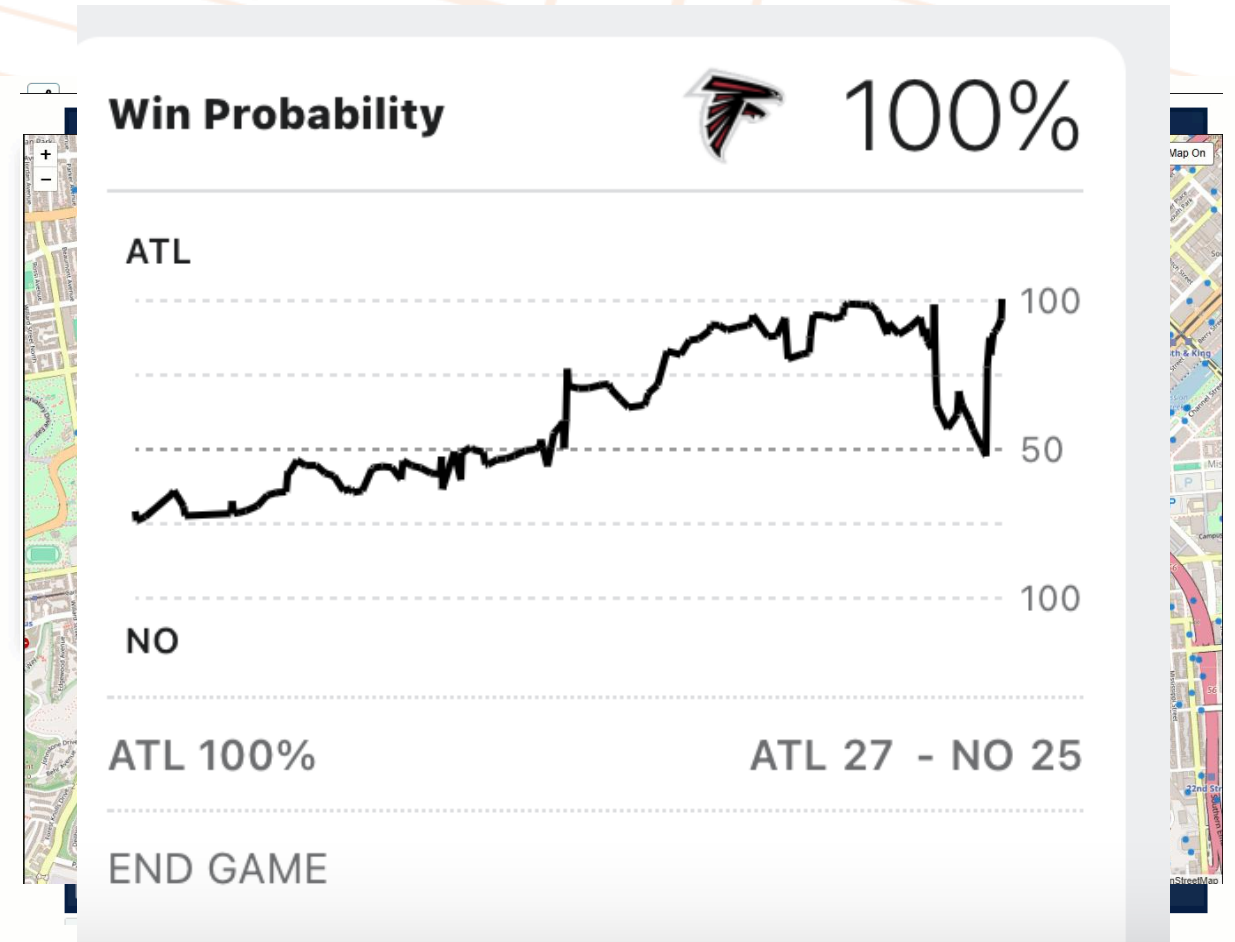

Wrap-up & Resources

Goals

-  Turn Stats → Stories
-  Build Interactive Fan Tools
-   Fuse Maps + Metrics

Why Visualization?

- Tell a memorable story
- Spot patterns instantly
- Guide smarter decisions
- Hook users with interactivity

Real-World Examples

-  NFL Next Gen Stats [Charts](#)
-  Pro League Team [Pages](#)
-  Baseball Savant [Visuals](#)

Tools Overview

Chart.js

D3.js

F.A.N.S. Framework

F –  **Filter by Interest**

A –  **Analyze Stats**

N –  **Navigate the Map**

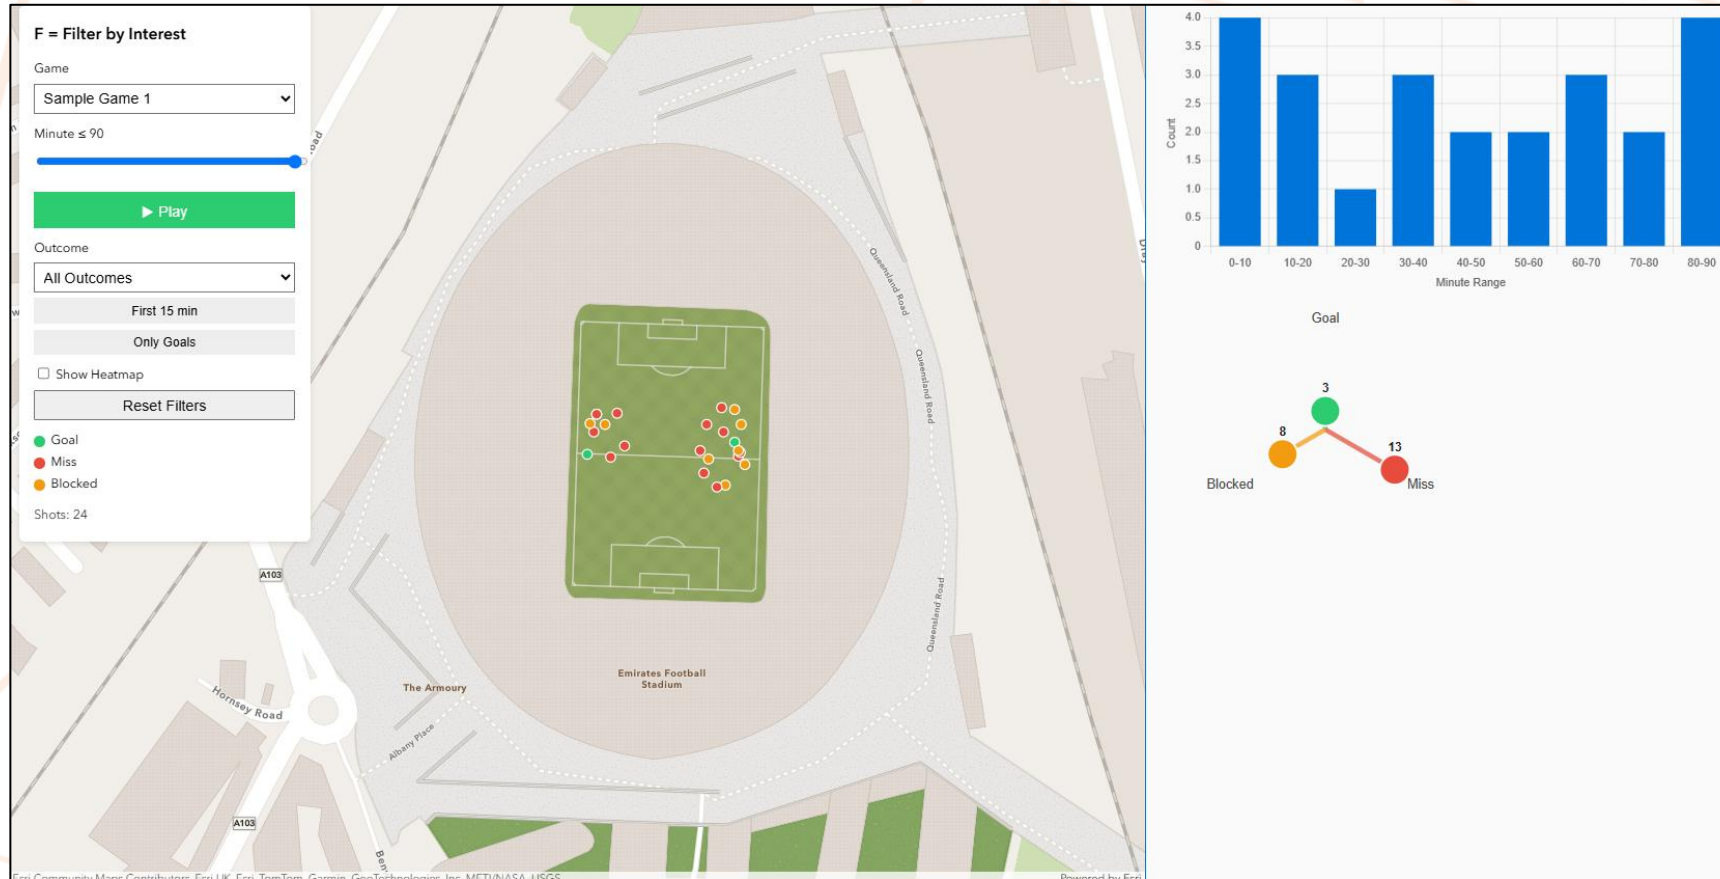

S –  **Simulate Scenarios**

F – Filter by Interest

Empower fans to zero-in on the exact slice of play they care about.

Demo 1: Filter by Interest

- Filter shots by time, type, or outcome
- Instantly see map and stats update

Key Takeaways: Filter by Interest

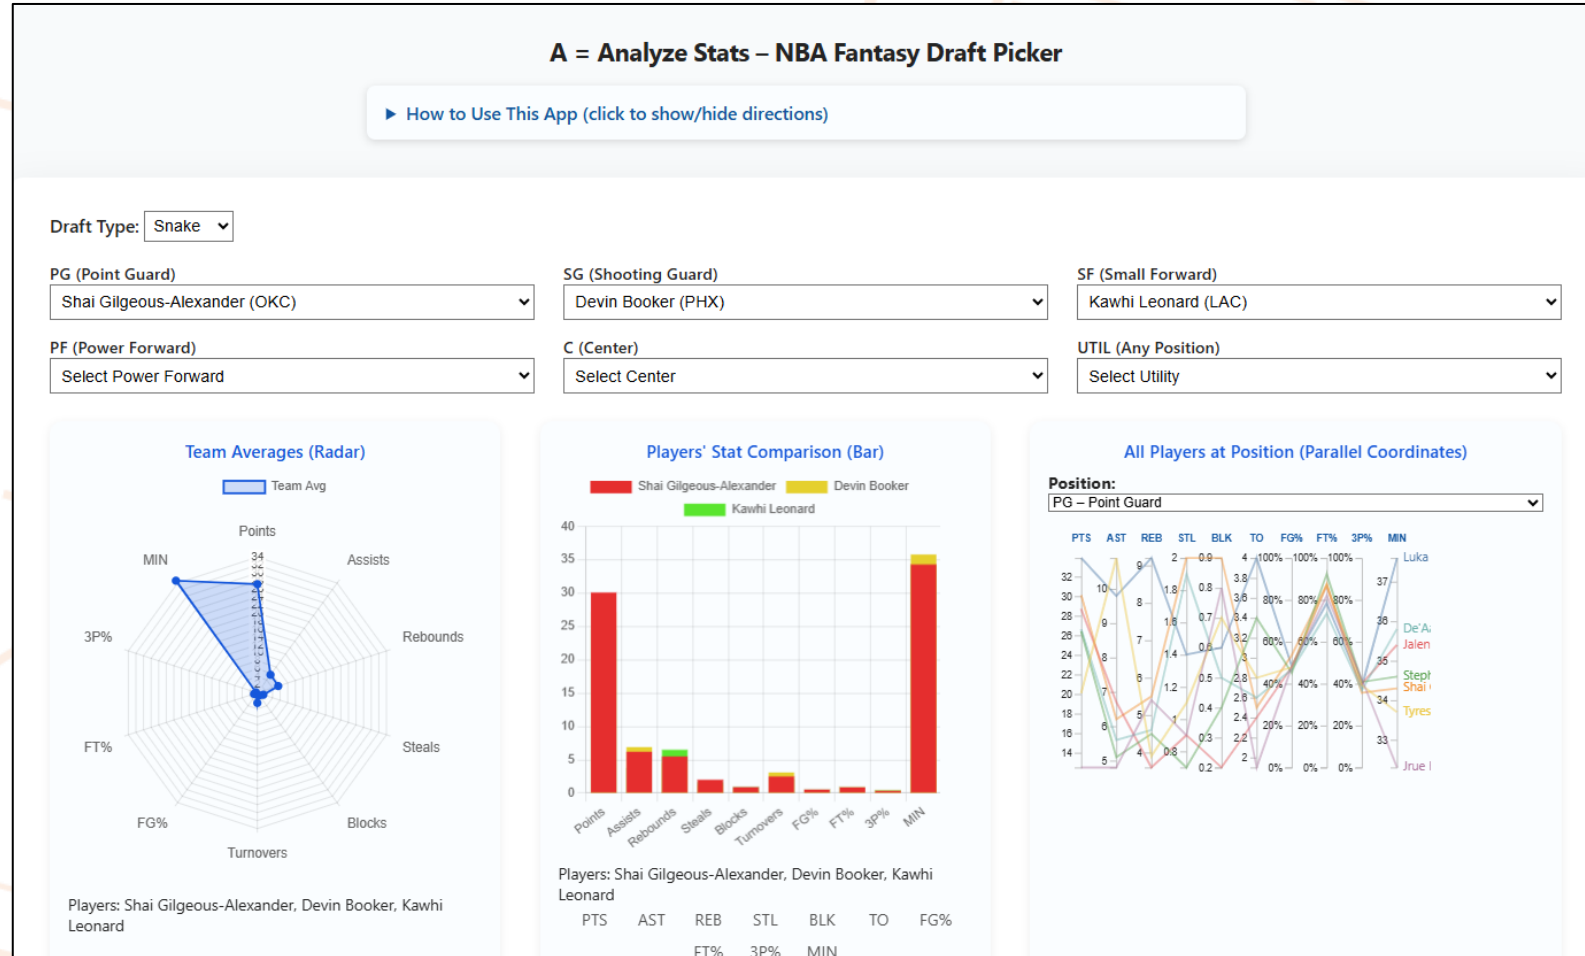

- From Pitch Coordinates → Map Coordinates
 - $\text{lon} = \text{stadiumLon} + (\text{x_norm} - 0.5) \times \text{pitchLonSpan}$
 - $\text{lat} = \text{stadiumLat} - (\text{y_norm} - 0.5) \times \text{pitchLatSpan}$
- Instant filtering by time, outcome, or event
- Interactive map and charts update in real time
- Uses ArcGIS JS, Chart.js, and D3.js for data-driven visuals

A – Analyze Stats

Equip fans to dive into key performance metrics and uncover deeper insights.

Demo 2: Analyze Stats

- Live-updating charts
- Data-driven picks

Key Takeaways: Analyze Stats

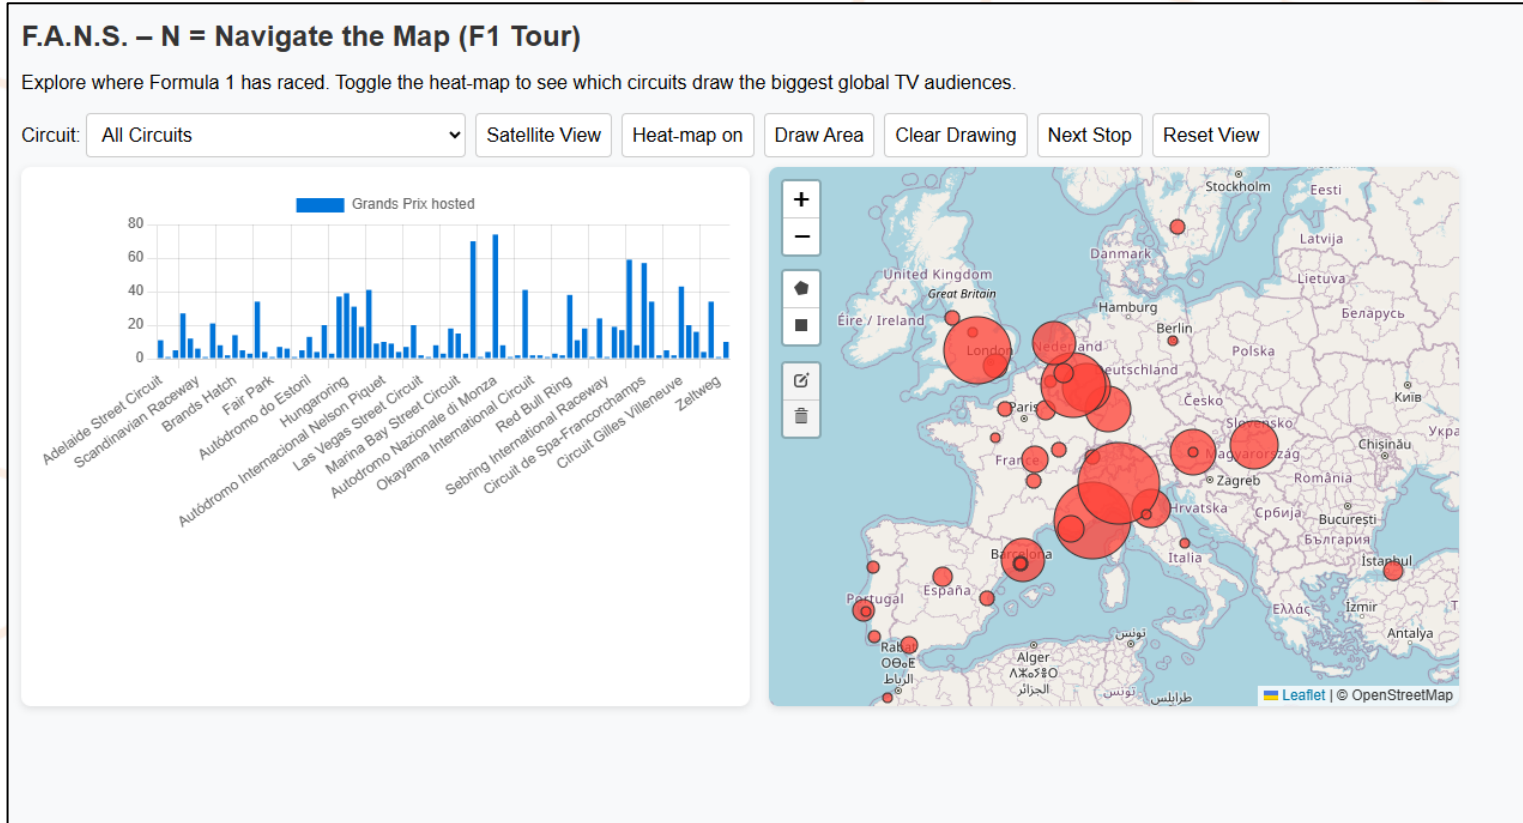

- Real-time stat dashboards drive adaptive, data-led decisions
- Chart.js + D3.js power rich, responsive visualizations
- Reactive dropdown logic ensures context-aware user flows

N – Navigate the Map

**Let fans explore the spatial story
behind the action on an intuitive,
interactive canvas.**

Demo 3: Navigate the Map

- Explore where F1 races happen
- Connect place with data interactively

Key Takeaways: **Navigate the Map**

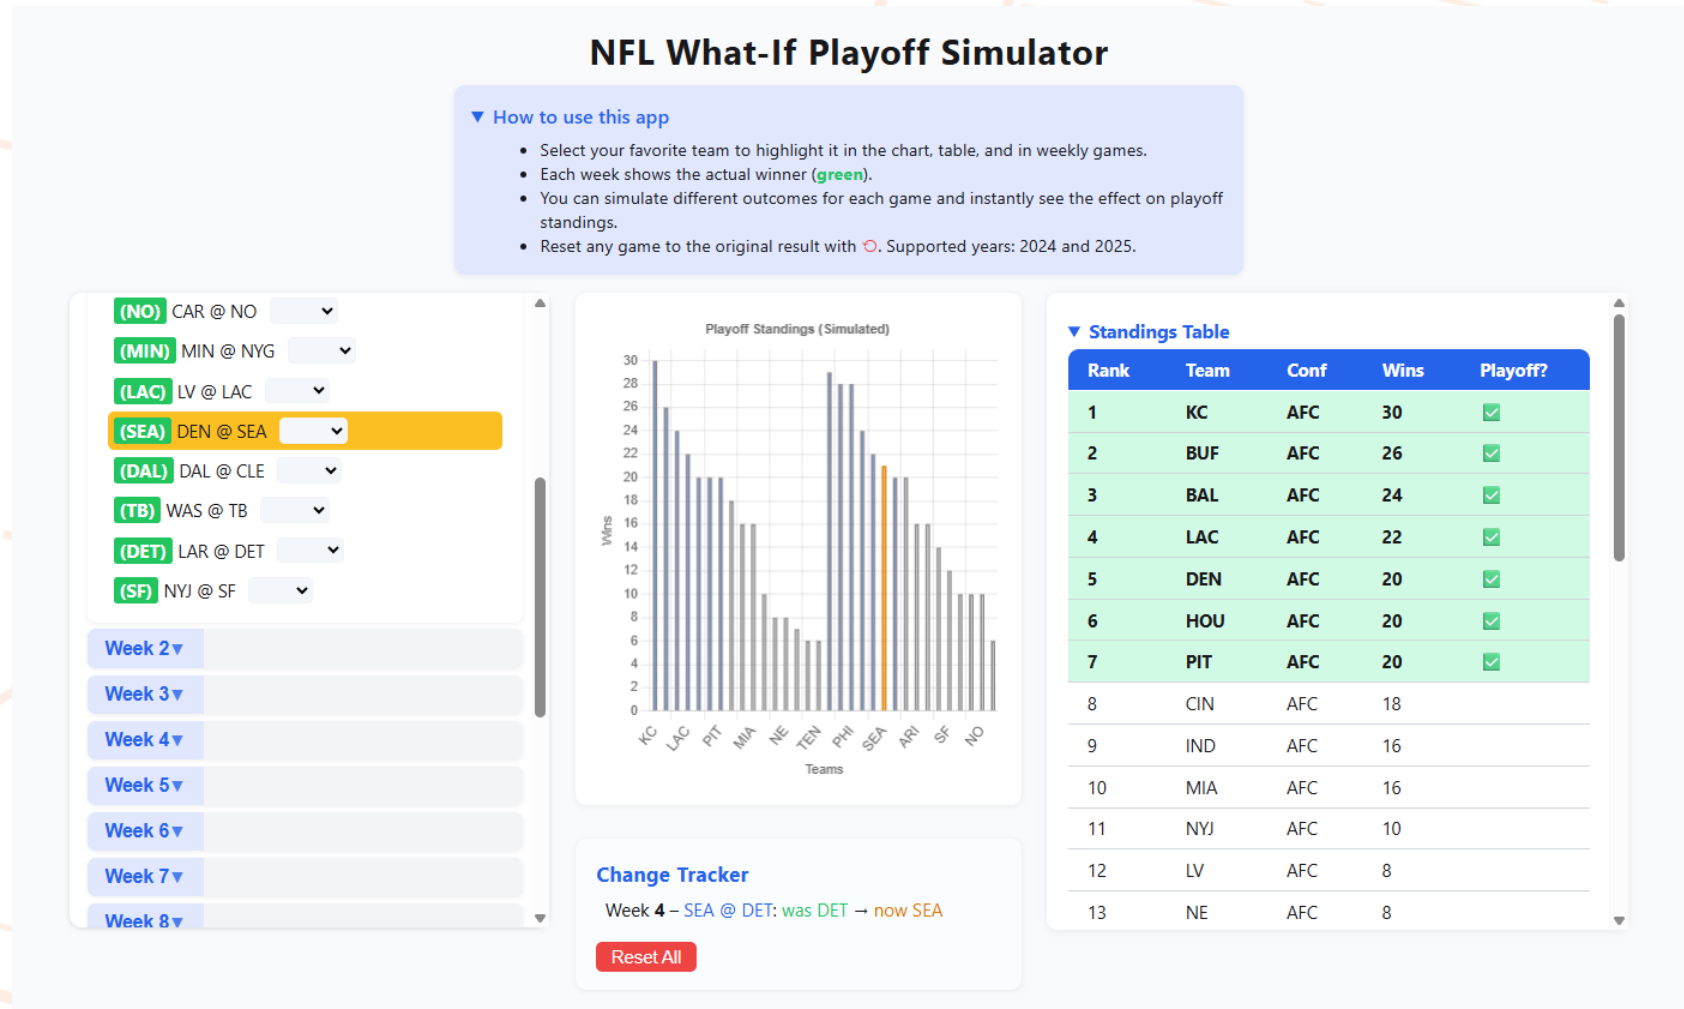

- Navigate sports data by location
- Interactive map + chart views
- Built with Leaflet, Chart.js, Ergast API

S – Simulate Scenarios

Give fans the power to rewrite history and explore “what-if” scenarios for unlimited replay value.

Demo 4: Simulate Scenarios

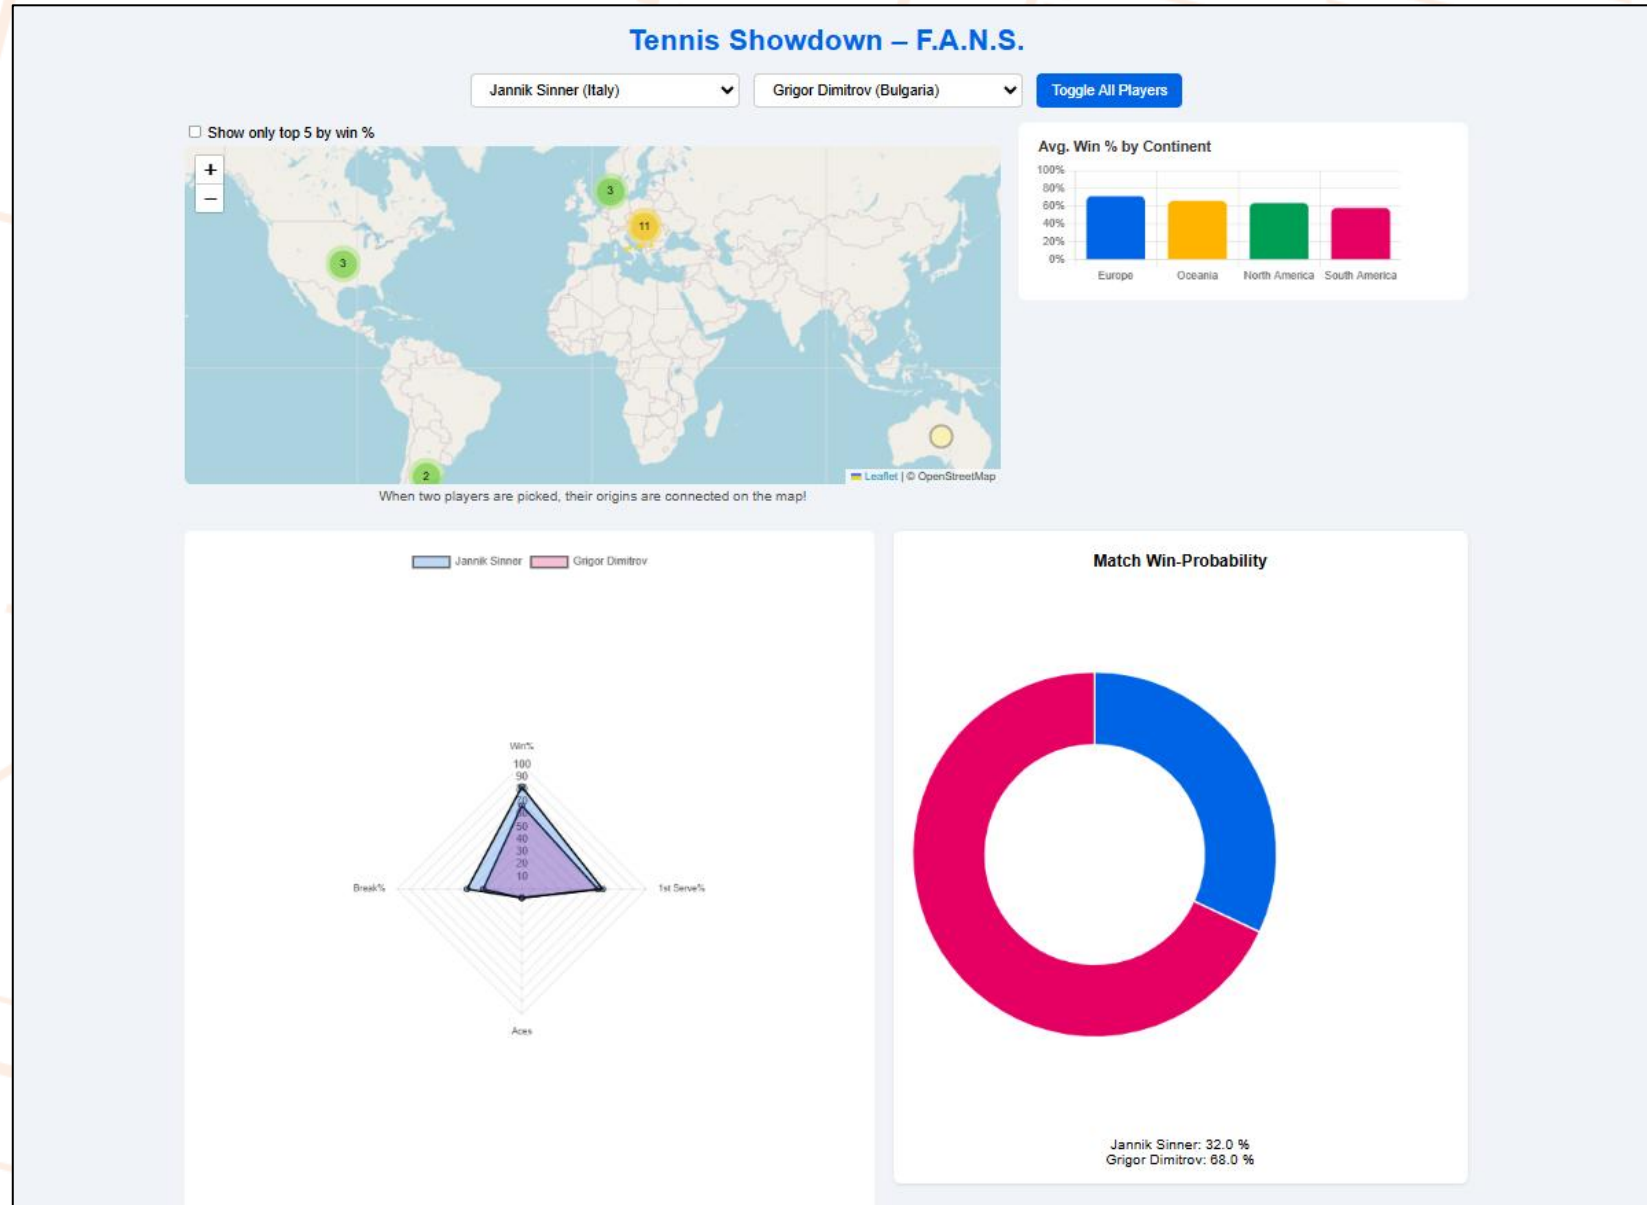

- Explore where F1 races happen
- Connect place with data interactively

Key Takeaways: Simulate Scenarios

- Live “what-if” game flips
- Auto change log
- AFC/NFC split with fresh ranks
- SportsData.io + Chart.js

Final Integration Demo

- Visualize global matchups
- Filter and explore

Final Integration Takeaways

- Context transforms stats
- Interactivity drives insights
- Visual storytelling matters
- Simple code, big impact

F.A.N.S. + Tools Summary

F.A.N.S. Framework

- **Filter by Interest:** Let fans explore what matters to them.
- **Analyze Stats:** Make complex performance data simple and interactive.
- **Navigate the Map:** Add geographic context for a global sports perspective.
- **Simulate Scenarios:** Turn “what if?” into engaging, visual experiences.

Key Tools & Libraries

- **Leaflet.js:** Interactive, customizable maps for player origins & context.
- **Chart.js & D3.js:** Beautiful charts for stats, trends, and comparisons.
- **Modern JS/HTML/CSS:** Easy integration for live data and rich user interactivity.

Tips & Best Practices

- Focus on Fan Perspective
- Keep Data Visualizations Clear
- Emphasize Discoverability
- Iterate and Gather Feedback

Resources

- [Repo for this talk](#) – demos and slides
- [Metrica-Sports Sample Data](#) – Raw event and tracking data for soccer/football analysis
- [Leaflet](#) – Interactive web mapping library
- [Chart.js](#) – Simple, powerful charting
- [D3.js](#) – Advanced data-driven visualizations
- [SportsDataIO](#) - Commercial sports statistics API
- [Esri Developer Documentation](#) - Guides & References for ArcGIS SDKs
- [Ergast F1 API](#) - Historical Formula 1 race & circuit data
- [API-Sports Tennis API](#) - comprehensive tennis stats & player information
